  - The frequency of the ripple current is 100Hz or higher
  - The average current for each cycle does not exceed the maximum allowable DC forward current
  - The maximum amplitude of the ripple does not exceed the maximum peak pulsed forward current.

# Product Bin and Labeling Definitions

## Decoding Product Bin Labeling

In the manufacturing of semiconductor products, there are variations in performance around the average values given in the technical datasheet. For this reason, Lumileds bins components for luminous flux or radiometric power, color point, peak or dominant wavelength and forward voltage..

LUXEON IR ONYX emitters are labeled using a 2-digit alphanumeric CAT code following the format below:

**A B**

Where:

- A** – designates radiometric power bin (example: J=40 to 48mW, K=48 to 56mW)
- B** – designates forward voltage bin (example: D=3.0 to 3.1V, E=3.1 to 3.2V)

Therefore, a LUXEON IR ONYX emitter with a radiometric power range of 48 to 56 mW and a forward voltage range of 3.1 to 3.2V has the following CAT code:

**K E**

## Radiometric Power Bins

Table 4 lists the standard radiometric power bins for LUXEON IR ONYX emitters. Although several bins are outlined, product availability in a particular bin varies by production run and by product performance. Not all bins are available in all proliferations.
